Post Graduation Plans

1. Share what your plans after graduation are:
    a. if you are planning to pursue more schooling, please share what type of program you plan to apply for and when the application dates are
    b. if you have already accepted a job, please share your job title and where you will be working
    c. if you have not accepted a job yet but plan to work, what types of jobs do you plan to apply for?

    I will work as a **Cloud Based Data Engineer & Platform Architect** for EnableCV in Midvale, UT.

2. Ideally, what will you be doing professionally in five years? (For those planning to pursue a graduate degree, assume that you have finished your degree.)

    I am hoping to have made progress in the career path dealing with Data Engineering, and working with as much ML or AI integration for any application functional use or Business Intelligence. Once reaching a ceiling, I would have no issues returning to school for a PhD level degree. I know there are a few programs I've already researched that provide an option to Master Out, or continue to the PhD. I like the idea of having an exit if the research is either overwhelming or if I've realized a Thesis project is all I would need for my career progression.

    So honestly, it depends….

3. Find at least five job ads that relate to something you think you might want to pursue. Job ads disappear, so save the entire job ad into your Google Doc / PDF rather than just a job link. Then, identify when you envision applying for each job (immediately after graduation, in five years, etc).

4. Think about jobs you are qualified for today and the jobs that might be the next job down the road. Don't pick anything that requires more than 5 or 6 years of experience. Make sure you have at least a couple that are close to entry-level if you are looking for a job but have not yet accepted a job.

Jobs I'm Qualified For Today

Platform Architect / Data Platform Engineer (2–4 years)
I own the full data stack at EnableCV: Prod2Dev and BC2ADLS pipelines, workspace management, Bicep/IaC, 27+ deployment scripts, and artifact validation.

Senior Data Engineer (3–5 years)
I design and run pipelines (CDM, Parquet), SQL models, stored procedures, and Spark notebooks. I manage 7 pipelines, 11 datasets, and 4 linked services.

Analytics Engineer (2+ years)
I build Power BI validation tooling (Power BI REST API, DAX checks), sales/MoM validation, and semantic model repointing.

DevOps Engineer (Data) (2–4 years)
I own deployment scripts, triggers, monitoring, and pre-upload validation. I manage Prod2Dev sync and artifact export/transform workflows.

Jobs That Could Be Next (4–5 Years Out)

Staff Data Engineer / Principal Data Engineer (4–5 years)
After 2–3 more years of owning platform architecture and leading larger projects.

Data Platform Architect (4–5 years)
After more experience with workspace management, cost reporting, and RBAC/IAM.

ML/Data Engineer (ML Infrastructure) (4–5 years)
After upskilling in ML/AI and building ML pipelines on top of current data platform work.

Jobs Further Down the Road

Senior ML Engineer / AI Data Platform (4–5 years)
